Below you will find a predator/prey pyramid. Cut out the images from page two and place them in their appropriate level on the pyramid.
Producers - uses the sun's energy to create their own food
Primary Consumer (herbivore) - an animal that eats plants
Secondary Consumer - an animal that eats primary consumers
Apex Predator - sits on the top of the food chain and has no natural predators

How do each of these animals or plants fit into our predator/prey pyramid? Do they eat meat or plants? Do they have any natural predators? Are they able to produce their own food?
